

DISSERTATION CASE STUDY
ON
**SRS FOR E-TRADE MANAGEMENT
SYSTEM ARCHITECTURE**

Authors: Oleg Pursky, Pavlo Demidov, Anna Selivanova, Volodymyr Kulazhenko, and Oleksander Kharchenko (IEEE ATIT 2019).

Software Requirements Specification (SRS)

Source Paper: *E-trade Management System Architecture*

1. Introduction

1.1 Purpose

The purpose of the proposed system is:

"The purpose of this work was to develop an architecture model for e-trade (ET) management system."

1.2 Scope

The proposed system supports electronic trading by providing customer-facing services and enterprise management functions.

1.3 Intended Users

User
Consumer
Customer
Marketing Department
Store Managers
Suppliers
Accounting / Banks

2. Overall Description

2.1 Product Functions

The proposed system provides:

- User interaction
- Order management
- Product information management
- Customer management
- Advertising and marketing support
- Shop window management
- Financial management
- Resource management

- Delivery management

2.2 Dependencies

The paper states that the system interacts with:

- Suppliers
 - Manufacturers
 - Customers
 - Accounting
 - Banks
 - Payment systems
-

3. Functional Requirements

ID	Requirement
FR-01	The system shall interact with users, receive orders and collect primary information.
FR-02	The system shall process orders, manage delivery and support enterprise business processes.
FR-03	The system shall generate shop window data from product assortment information and business rules.
FR-04	The system shall provide detailed product information.
FR-05	The system shall gather, structure, update and process product information.
FR-06	The system shall manage advertising and marketing activities.
FR-07	The system shall support customer management and personalization.
FR-08	The system shall identify consumers and support order creation.
FR-09	The system shall support unified registration and authorization across showcases.
FR-10	The system shall support interaction with third-party payment systems.
FR-11	The system shall monitor markets, suppliers and prices.
FR-12	The system shall verify orders and monitor order execution.
FR-13	The system shall interact with accounting, banks and payment systems.
FR-14	The system shall manage the resources of the Web-enterprise.
FR-15	The system shall manage order delivery.

4. Non-functional Requirements

ID	Category	Requirement
NFR-01	Scalability	The system shall support scalability.
NFR-02	Flexibility	The system shall provide a flexible environment.
NFR-03	Interoperability	The system shall provide platform-independent service access.
NFR-04	Availability	Data shall be available for online operation.
NFR-05	Integration	The system shall support a high level of informational integration.

5. Constraints

ID	Constraint
C-01	Service access interface should not depend on the software application platform.
C-02	Each information system handles its own data class.

6. Assumptions

The source paper does not explicitly specify assumptions regarding the proposed software system. Therefore, no additional assumptions were introduced during the SRS extraction process
